

DETROIT
ASSURANCE

RADAR SYSTEM

CAMERA SYSTEM

Make safety your top priority with Detroit Assurance 4.0, which integrates seamlessly in the new Freightliner Cascadia® equipped with a Detroit™ engine with either a DT12™ or a manual transmission.

The Detroit Assurance radar system:

- Tracks up to 40 objects simultaneously, up to 825 feet in front of the truck, identifying the top six vehicles by level of threat.
- The Video Radar Decision Unit (VRDU2) refreshes the speed, distance, and time calculations 200 times per second. All these actions work together to provide the safest environment possible.

BRAKE ASSIST

Detroit Assurance Radar reports the distance, velocity, width, lateral offset, type, and confidence level of six vehicles in the truck's path.

BRAKE ASSIST

Full braking on stationary objects (ABA 4.0) with Active Brake Assist 4.0 —

The radar tracks constantly stationary objects and has the capacity to engage full braking on these objects, such as a vehicle parked and unloading or stopped traffic in the truck's path that has not moved as the truck approaches.

For more information on **Detroit Assurance™ 4.0 Suite of Safety Systems** scan the QR Code links.

<https://demanddetroit.com/technology/safety>
https://www.youtube.com/watch?v=IG1bq9asl_4

MOVING PEDESTRIAN WARNING (ABA 4.0) With Moving Pedestrian Warning, the radar system on the new Cascadia can detect most pedestrians in motion and, as long as they stay in motion, can act to help mitigate a collision at vehicle speeds below 25 MPH. Moving Pedestrian Warning can detect most pedestrians that are moving within the truck's path. If the Moving Pedestrian Warning system detects a pedestrian in motion within the radar system's parameters for potential danger, the truck will engage in partial braking. Moving Pedestrian Warning is not functional at highway speeds and may not detect pedestrians in every possible situation, nor is it a substitute for cautious driving.

ADAPTIVE CRUISE CONTROL (ACC) automatically adjusts the truck's cruising speed to maintain a safe following distance – 3.6 seconds – from other vehicles in its path, allowing the truck to remain in cruise control longer. With the optional headway control in the new interactive dash display, distance can be adjusted between 2.4 and 3.6 seconds.

TAILGATE WARNING Independent of the Active Brake Assist and Adaptive Cruise Control features, Tailgate Warning will activate according to a truck's speed and the following distance.
